Topic description 募集概要

ExpectedOutcome:

Raw materials need to be competitively processed and refined in Europe in a sustainable way, including reduced environmental footprint, and improved social aspects and competitiveness. This is underlined in the recently published list of Critical Raw Materials (https://ec.europa.eu/growth/sectors/raw-materials/specific-interest/critical_en) and the Circular Economy Action Plan (<https://ec.europa.eu/environment/circular-economy/>).

Project results will contribute to decreasing dependency of Europe on imported battery chemicals and raw materials. As a result new business opportunities and jobs will be created for the European industry.

Projects are expected to coordinate with projects funded under Cluster 4 RESILIENCE Green and Sustainable Materials topics. Projects are expected to contribute to European Raw Materials Alliance objectives.

Project results are expected to contribute to all of the following expected outcomes:

プロジェクト名→ Sustainable processing of Europe's low-grade sulphidic and lateritic nickel/cobalt ores and tailings into battery-grade metals

Fact Sheet News & Multimedia

Project description

プロジェクトの要旨→ Sustainable refining methods for the profitable recovery of nickel and cobalt

Electric vehicles are expected to dramatically increase the demand for nickel (Ni) and cobalt (Co) over the next two decades. Europe is expected to face difficulties in securing a reliable, affordable and sustainable supply chain as the concentration of such minerals in the continent is scarce. The EU-funded ENICON project aims to improve the refining capacity of domestic and imported low-grade Ni/Co. ENICON's metal recovery route using hydrochloric acid dispenses with the old-school hydro-based approach that involves continuously precipitating and redissolving metals. Thus, it reduces the amount of chemicals needed for metal dissolution, which result in the production of potentially harmful waste streams.
