Topic description **募集概要**

ExpectedOutcome:  
Raw materials need to be competitively processed and refined in Europe in a sustainable way, including reduced environmental footprint, and improved social aspects and competitiveness. This is underlined in the recently published list of Critical Raw Materials ([https://ec.europa.eu/growth/sectors/raw-materials/specific-interest/critical\\_en](https://ec.europa.eu/growth/sectors/raw-materials/specific-interest/critical_en)) and the Circular Economy Action Plan (<https://ec.europa.eu/environment/circular-economy/>).

Project results will contribute to decreasing dependency of Europe on imported battery chemicals and raw materials. As a result new business opportunities and jobs will be created for the European industry.

Projects are expected to coordinate with projects funded under Cluster 4 RESILIENCE Green and Sustainable Materials topics. Projects are expected to contribute to European Raw Materials Alliance objectives.

Project results are expected to contribute to all of the following expected outcomes:

Project description

DE EN ES FR IT PL

プロジェクトの要旨 → **Sustainable refining methods for the profitable recovery of nickel and cobalt**

Electric vehicles are expected to dramatically increase the demand for nickel (Ni) and cobalt (Co) over the next two decades. Europe is expected to face difficulties in securing a reliable, affordable and sustainable supply chain as the concentration of such minerals in the continent is scarce. The EU-funded ENICON project aims to improve the refining capacity of domestic and imported low-grade Ni/Co. ENICON's metal recovery route using hydrochloric acid dispenses with the old-school hydro-based approach that involves continuously precipitating and redissolving metals. Thus, it reduces the amount of chemicals needed for metal dissolution, which result in the production of potentially harmful waste streams.
